TITLE: Effect of additions of rare-earth metals and their oxides on properties of some stainless steels

SOURCE: Metallovedeniye i termicheskaya obrabotka metallor, no. 8, 1963, 55-59

TOPIC TAGS: stainless steel, Kh18Ni9Ti steel, AISI 321 steel, Kh23Ni8 steel, AISI 310 steel, Kh17Ni3M2 steel, AISI 316 steel, misch metal effect, ferrocerium effect, lanthanum effect, cerium dioxide effect, lanthanum oxide effect, praseodymium oxide effect, steel hot ductility, steel structure, nonmetallic-inclusion content, cast structure, ingot structure

ABSTRACT: The effect of addition of 0.05--0.35% misch metal [50% Ce, 25% La, and 25% various rare-earth metals] or 0.05--0.4% ferrocerium, lanthanum, cerium dioxide, lanthanum oxide, and praseodymium oxide on structure, phase composition, amount of nonmetallic inclusions, room-temperature mechanical properties, and hot ductility of Kh18Ni9Ti [AISI 321], Kh23Ni8 [AISI 310], and Kh17Ni3M2 [AISI 316] stainless steels has been investigated. None of

Card 1/2

the additions was found to have a significant effect on the crystal structure of ingots of any steel tested. The forged metal had a fine-grained structure with a low content of oxide and sulfide inclusions. A 0.15-0.25% addition of misch metal reduced the amount of carbonitride inclusions in all steels tested. Kh18N10T steel containing 0.1% misch metal had improved hot ductility. In the Kh23N18 steel addition of 0.5 and 0.05% misch metal improved the ductility at 1100-1250 and 1000C, respectively. Addition of 0.05-0.15% misch metal or 0.15-0.30% La improved ductility of Kh17N13M2T steel at 1000C. Addition of ferrocerium, lanthanum, cerium dioxide, lanthanum or praseodymium oxides brought about no improvement in hot ductility or room-temperature mechanical properties of Kh17N13M2T steel. Orig. art. has: 4 figures and 1 table.

TITLE:

An Investigation of the Dielectric Losses and the
Dielectric Constants of Several Forms of Ceramics in the
Super-high Frequency Range

PERIODICAL:

Fizika tverdogo tela, 1960, Vol. 2, No. 10, pp. 2497-2504

TEXT: The authors give the results of measurement of ϵ and $\tan \delta$ in the
frequency range of $7 \cdot 10^4$ - $3.75 \cdot 10^{10}$ ω and for temperatures between
20 - 500°C, for two steatite ceramics of the types CK-1 (SK-1) and
TK-21 (TK-21), mullite-corundum ceramics of the type M-2 (M-2) and
insulation porcelain of the type M-23 (M-23). Measurements at radio-
frequencies were carried out with Q-meters of the types KB-1 (KV-1) and
YK (UK). For measurements up to 10^{10} c, a resonator device (Fig. 1)
having a cylindrical volume resonator developed at the VNIIFTRI, was

used. For measurements carried out at high temperatures, the wave guide shown in Fig. 2 was used. In Fig. 3, ϵ and $\tan\delta$ are graphically represented as functions of the frequency for the materials investigated here. In Figs. 4-7, ϵ and $\tan\delta$ of the above mentioned materials are shown as functions of temperature for the frequencies $7 \cdot 10^4$, 10^7 , 10^9 , and

10^{10} c. It is found that in all materials ϵ decreases on transition from radiofrequencies to super-high frequencies and $\tan\delta$ increases. The increase of ϵ and $\tan\delta$ with an increase of temperature is considerably lower at 10^{10} c than at other frequencies. The degree of this change depends on the composition, and the kind of structure. There are 7 figures, 1 table, and 8 references: 7 Soviet and 1 US.

AUTHOR: Zlatkis, T.S.

TITLE: The Revision of Methodical Instructions Nr 88 (O peresmotre metodicheskikh ukazaniy No 88)

PERIODICAL: Izmeritel'naya tekhnika, 1959, Nr 4, p 44 (USSR)

ABSTRACT: The Tekhnicheskoye upravleniye Komitetu standartov, mer i izmeritel'nykh priborov (Technical Directorate of the Committee of Standards, Measures and Measuring Instruments) revised the methodical instructions Nr 88 for the acceptance tests of potentiometric devices in 1957. In the author's opinion, several sections are now outdated and the methodical instructions should be revised as a whole. Presently, the Soviet industry produces potentiometers PPTV1 with voltage divider DN1, potentiometers P2/1 with voltage divider R-5, potentiometers R375 and potentiometers PPTN-1. Therefore, the methodical instructions should be especially adapted to these types. The author also points out typographical errors found in the last edition.

Card 1/2

The Revision of Methodical Instructions Nr 88 SOV/115-59-4-26/27

An editorial note says that the author's statements will be taken into consideration during the revision of the methodical instructions Nr 88 by VNIIC in 1959.

Analysis

Let E be a set of points in $[0, 1]$ whose decimal expansions contain only the integers 0 and 1. Then E is a perfect set of measure 0. See for example Halmos and Wightman, Trans. Amer. Math. Soc. 94 (1954) 129-133 for the measure of the fact that E is perfect is elementary. Furthermore, E is open in P_0 , P_0 is a perfect set.

TITLE: A Comparative Evaluation of the Efficacy of Measures to Combat Synanthropic Flies Using DDT, BCH and Chlorophos, and the Further Prospects in Destroying These Insects

PERIODICAL: Zhurnal mikrobiologii, epidemiologii i immunobiologii, 1959, Nr 6, pp 66-73 (USSR)

ABSTRACT: Because of the disappointing effects of DDT and BCH in combatting flies in areas where these drugs have been used for a number of years, many authors maintain that the flies have developed a resistance to these agents (Derbenova-Ukhova, Morozova). Further, V.I. Vashkov, Pogodina and N.A. Sazonova maintain that the insecticidal properties of DDT and BCH vary with the climatic factors, the physical and chemical properties of the surface under treatment and the physiological condition of the insects. The present work gives the results of fly-clearance work carried out in different districts of Minsk by the Minskaya gorodskaya dezinfektsionnaya stantsiya (Minsk City Disinfection Station) using DDT, BCH and chlorophos. It was found that the combined use of one drug from

each group (chlorine organic compounds, i.e. DDT, hexachlorane and phosphorous organic compounds, i.e. chlorophos, carbophos) considerably increased the effectiveness of the anti-fly campaign, especially in areas without sewage facilities. Identical results were obtained in all sections of the city. These underlined the need for adequate garbage disposal and proper sanitation and sewage facilities to make the anti-fly measures really successful.

Title : The task of the electrical industry is to create a new
electrical equipment for agriculture

Periodical : Elektrichestvo, 3, 1-4, Mr 1955

Abstract : The authors state that the rapid development of rural
electrification requires a constant improvement of
equipment. They enumerate achievements already obtained
and set the most important tasks to be solved in the very
near future. These include the production of vertical
water-wheel generators with a hollow shaft, equipped with
exciter (governor-feeding generator) and automatic voltage
regulator. Other developments include distribution
substations, outdoor equipment, aluminum and steel over-
head conductors, and economical underground cables with

Title : My Views and the Views of Leading Soviet Schools on the
Concept of Forest Typology.

Orig Pub : Sbor. Vysoke skoly zemed. a Lesn. fak. Brno, 1956, C, No
4, 109-131.

Abstract : Analyzing the views of V.N. Sukachev and P.S. Pogrebnnyak
on forest typology and contrasting them with his own,
the author concludes that for the conditions in which he
is working the principles upon which he bases his research
are more correct, and therefore they stand in no need of
correction of supplementation. For elaboration of his
own views on forest typology the author refers to his

Title : A Basis for Complex Typological Investigation and Exploration of the Forests, and Survey of Groups of Forest Types, in Czechoslovakia

Orig Pub: Za sots. s.-kh. nauku, 1956, A5, No 4, 397-434.

Abstract: Extracts are presented from the report on the forest typology conference in December, 1954 of the assembled Czechoslovakian Academy of Agricultural Sciences. Various extreme tendencies in forest typology are critically examined. The admissability of methods of judging forest types either by investigating only permanent site properties, or only phytocenotic characteristics,
